

KSHITIJ RANGARI

Senior Front-End Engineer

Toronto, Ontario (EST) | +1 647-454-4941 | kshitij.rangari92@gmail.com

Canadian Citizen — Available for remote work with EST overlap

PROFESSIONAL SUMMARY

Senior Front-End Engineer with 9+ years of experience shipping high-performance React and Next.js applications in fast-moving product environments. High-agency builder who takes full ownership — from architecture decisions to daily deployments — and thrives on turning complex workflows into clean, intuitive user experiences. Proven ability to move fast without breaking things: three independently shipped side projects alongside full-time engineering roles. Experienced integrating AI and LLM-powered features into production frontends. Comfortable working closely with product, design, and backend teams to make pragmatic decisions and iterate quickly. Looking to bring that same intensity and ownership to an ambitious, early-stage AI company.

CORE COMPETENCIES

Frontend: React • Next.js • TypeScript • JavaScript (closures, prototypes, async/await) • Angular • Redux • NgRx • RxJS • Tailwind CSS • HTML5 • CSS3 • SASS

UI & Product: Responsive Design • Accessibility (WCAG 2.0) • Component Architecture • Design Systems • Cross-browser Compatibility • Web Performance Optimization

APIs & Debugging: REST APIs • GraphQL • HTTP • Postman • API Integration & Debugging • Async Processing Pipelines

Cloud & DevOps: AWS (Lambda, EC2, Secrets Manager) • Azure • CI/CD Pipelines • Azure DevOps • Vercel • Jest • Agile/Scrum

AI & Backend: LLM Integration • OpenAI GPT-4 Vision • TensorFlow • PyTorch • Node.js • .NET/C# • SQL (MySQL, MSSQL)

WORK EXPERIENCE

Specialist Software Engineer | *LTIMindtree Ltd.* — Client: Paramount, New York | May 2021 – Present

- Owned and shipped major features for a large-scale digital asset management platform serving 1M+ users — making fast, pragmatic decisions across architecture, implementation, and deployment.
- Led full migration from Angular to Next.js, cutting page load latency by ~35% and unlocking server-side rendering — a complex, multi-quarter initiative delivered end-to-end with full ownership.
- Built and maintained reusable component libraries and frontend frameworks, enabling faster feature delivery and design consistency across multiple product teams.
- Integrated REST APIs and designed async processing pipelines to connect frontend workflows with cloud storage and downstream systems — debugging and validating integrations using Postman and browser tooling.
- Automated CI/CD pipelines in Azure DevOps, cutting release cycle time by ~40% and enabling rapid daily deployments with zero downtime.
- Worked directly with product and design to translate complex media workflows into clean, intuitive user experiences — balancing speed of delivery with high standards for polish and quality.
- Mentored junior engineers through rigorous code reviews, reinforcing high standards for code quality, testing, and shared ownership of the product.

Programmer Analyst | *Dotcom Team LLC* — Client: ViacomCBS, New York | Sept 2018 – May 2021

- Led full modernization of a legacy media platform (Knockout.js → Angular), taking ownership of architecture, implementation, and delivery for a high-traffic enterprise application.
- Designed scalable state management using NgRx and RxJS to support real-time media search and complex, data-heavy user interactions — keeping the UI fast and responsive under load.

- Instrumented frontend observability and error tracking via Azure Application Insights, enabling rapid detection and resolution of production issues.
- Partnered with QA and DevOps to ship automated testing and CI pipelines — moving fast while maintaining confidence and reducing post-deployment incidents.

Jr. Angular Developer | *Insight Global LLC — Client: Viacom, New York* | April 2017 – Aug 2018

- Built responsive, accessible UI components with Angular Material — establishing cross-browser compatibility patterns for media management tools used by thousands of users.
- Fixed 50+ critical production bugs and enforced WCAG 2.0 accessibility compliance — developing a sharp eye for detail and quality from early in my career.

INDEPENDENT PROJECTS

Accessly — AI-Powered Video Accessibility Platform (*Next.js · Tailwind CSS · FastAPI · OpenAI GPT-4 Vision · TensorFlow · PyTorch · OpenCV · FFmpeg*)

- Designed and shipped a full-stack AI application that uses GPT-4 Vision, TensorFlow, and TransNetV2 to detect scene changes, recognize faces, and generate natural language audio descriptions — built entirely independently, from architecture to production.
- Owned every layer: system architecture, async API pipelines, AI output validation and fallback logic, and UX decisions for surfacing AI-generated content to users. The kind of full-stack, high-ownership build DualEntry is looking for.

VoltaPlay — Community Sports Platform (*React Native · Expo · Firebase · TypeScript · Cloud Functions*)

- Designed and shipped a cross-platform mobile app (iOS & Android) 0-to-1 — real-time chat, player ratings, Firebase cloud infrastructure, and scalable data modeling, all built and deployed independently.

AppHalter — Android Productivity App (*Android · Kotlin · VPN APIs*)

- Built and shipped a privacy-first Android app using local VPN APIs to block per-app internet access — navigating complex platform constraints independently and deploying a working production app.

EDUCATION

Master of Science, Computer Science

New York Institute of Technology | 2015 – 2016

Bachelor of Engineering, Computer Engineering

Mumbai University | 2011 – 2014
